### LABRADOODLE

**BREED STATISTICS:** This interpretation is based on a cross-section of 7254 canine patients of the LABRADOODLE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.31 - 0.76) for the breed. The breed average DI is 0.51 (solid square). The patient DI is the solid circle (0.32).

**SUMMARY:** The degree of laxity (DI = 0.32) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. **No radiographic evidence of OA for either hip.**
